Accessing the db on other devices

for uni

```
psql -h 10.8.18.92 -U <username> -d laptopChatBot -p 5432
```

for home

```
psql -h <IP address> -U <username> -d laptopChatBot -p 5432
```

Or through using pgadmin4

- Add a server to pgadmin4
    - Enter a designated name for your server
    - In the field: **Host name/address**
        - enter either the IP address for uni or for my house, not your device, the addresses in the commands above
    - If the port is not `5432` then change it.
    - The maintenance database is postgres
    - There will be two fields below this one
        - enter your username

- and your password
